

## CLEANING MANUAL DREAMGLASS®

### Cleaning DreamGlass® panels:

---

- 1.- Clean the glass, when it is in OFF position (disconnected-translucent state), with a dry or slightly humid (water) cloth, or with window-cleaning fluid which doesn't contain alcohol, ammonia and acetones. Be sure that the window-cleaning fluid does not reach the borders of the glass panel. The Films chemical component dissolves if it comes in contact with the window-cleaning products that contain the mentioned products. Hence, the affected zone would remain clear/transparent, and defective from that moment on.
- 2.- Before turning the glass panel ON (transparent state) again, be sure that all borders of the glass are completely dry.
- 3.- DreamGlass® Warranty is not applicable to defective glass panels which have been cleaned in an inappropriate way or have had contact with the products mentioned above.
